### HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

## DETAILED ACTION

### *Allowable Subject Matter*

1. Claims 2, 4, 6, 8, 10, 12 are allowed.
2. The following is an examiner's statement of reasons for allowance: Please see the "Applicant Arguments/Remarks Made in an Amendment" filed November 21, 2008 and below.

Claim 2 recites a charger for charging a secondary battery through a charging unit configured to control input power to be constant by using, as an input source, a fuel cell or a solar cell, comprising: a current-control circuit, a constant-power-reference-voltage control circuit, wherein the constant-power-reference-voltage control circuit includes two constant current circuits, an input-voltage detecting comparator, an output-voltage detecting comparator, and a reference-voltage capacitor, and the constant-power-reference-voltage control circuit is configured so that, when an output detected by the output-voltage detecting comparator is in a drooping state, by causing the reference-voltage capacitor to discharge through the constant current circuit to raise the output voltage, constant power is obtained at the voltage determined by controlling output voltage of the charger to be stabilized, and, when input power detected by the input-voltage detecting comparator is in an excessive state, by charging the reference-voltage capacitor through the constant current circuit, the reference value corresponding to the supply power is set.

Claim 4 recites a control circuit provided in a charger for charging a secondary battery through a charger unit configured to control input power to be constant by using, as an input source, a fuel cell or a solar cell, comprising: a current-control circuit, a constant-power-reference-voltage control circuit, wherein the constant-power-reference-voltage control circuit

includes two constant current circuits, an input-voltage detecting comparator, an output-voltage detecting comparator, and a reference-voltage capacitor, and the constant-power-reference-voltage control circuit is configured so that, when an output detected by the output-voltage detecting comparator is in a drooping state, by causing the reference-voltage capacitor to discharge through the constant current circuit to raise the output voltage, constant power is obtained at the voltage determined by controlling output voltage of the charger to be stabilized, and, when input power detected by the input-voltage detecting comparator is in an excessive state, by charging the reference-voltage capacitor through the constant current circuit, the reference value corresponding to the supply power is set.

Claim 8 recites a DC-DC converter for controlling input power to be constant by using, as an input source, a fuel cell or a solar cell, wherein the DC-DC converter includes a charger for charging a secondary battery through a charging unit configured to control input power to be constant, the charger having a current-control circuit including a constant-power-reference-voltage control circuit, wherein the constant-power-reference-voltage control circuit includes two constant current circuits, an input-voltage detecting comparator, an output-voltage detecting comparator, and a reference-voltage capacitor, and wherein the constant-power-reference-voltage control circuit is configured so that, when an output detected by the output-voltage detecting comparator is in a drooping state, by causing the reference-voltage capacitor to discharge through the constant current circuit to raise the output voltage, constant power is obtained at the voltage determined by controlling output voltage of the DC-DC converter to be stabilized, and when input power detected by the input-voltage detecting comparator is in an excessive state, by

charging the reference-voltage capacitor through the constant current circuit, the reference value corresponding to the supply power is set.

Claim 10 recites a control circuit in a DC-DC converter for controlling input power to be constant by using, as an input source, a fuel cell or a solar cell, wherein the DC-DC converter includes a charger for charging a secondary battery through a charging unit configured to control input power to be constant, wherein the control circuit includes a constant-power-reference-voltage control circuit, wherein the constant-power-reference-voltage control circuit includes two constant current circuits, an input-voltage detecting comparator, an output-voltage detecting comparator, and a reference-voltage capacitor, and wherein the constant-power-reference-voltage control circuit is configured so that, when an output detected by the output-voltage detecting comparator is in a drooping state, by causing the reference-voltage capacitor to discharge through the constant current circuit to raise the output voltage, constant power is obtained at the voltage determined by controlling output voltage of the DC-DC converter to be stabilized, and when input power detected by the input-voltage detecting comparator is in an excessive state, by charging the reference-voltage capacitor through the constant current circuit, the reference value corresponding to the supply power is set.

The prior art of record does not disclose the above limitations, nor would it be obvious to modify the art in such a manner. To clarify, the prior art may include a constant current circuit, various comparators, or a reference voltage capacitor; however, it does not include all of the components listed above carrying out the same functions, nor does any motivation exist for combining various prior art references to meet that subject matter.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
